START
extraction_node:
Puppeteer fetches and pre-processes DOM; identifies CMP type if possible
llm_node:
system prompt gets generated by get_system_prompt() function (Static prompt with Chain-of-Thought + Think-Step-by-Step + Strict-Grounding + static Few-Shot Examples); LLM analyzes DOM, decides next step
Did the LLM call a tool?
No
ruleset_output_node:
extracts final JSON form messages and writes a JSON structured string into the state[final_ruleset]
END
Yes
attempts >= 20?
Yes
No
observation: loop back
external input:
Feedback via console
human_review_node:
Trigger: attempts ≥ 20 and tool call pending
→ interrupt() pauses agent
→ State persisted in SQLite
→ Waiting for external feedback
LLM decides it needs human feedback and calls request_human_review
tool_node:
Tool is executed
analyse_screenshot
test_ruleset (args_schema: CoMRuleset (Pydantic) → Schema validation on invocation)
request_human_review
tool result: loop back
