- Pink/Magenta**
clickAndExtractSettings(frame, selector, page, cmpType)
- Blue**
getFrameState(frame)
- Red**
findSettingsButtonViaLLM(html)

Additional Hints for Used Variables

- page:** The active Puppeteer page instance representing the current browser tab and session.
- CMP_Selectors_Map:** A comprehensive dictionary mapping known CSS selectors to their respective CMP provider names (e.g., "OneTrust", "CookieBot").
- cmpType:** The specific name of the identified Consent Management Platform (e.g., "Sourcepoint"), determined during the detection phase.
- CMP_Selectors:** An array containing only the CSS selector keys from the map, used for efficient container scanning in the DOM.
- cmpSelector:** The individual CSS selector that successfully matched a CMP container within the current frame.
- selector:** A precise CSS string (prioritizing IDs, aria-labels or unique classes) used to target a specific interactive element, such as a settings button, for clicking.
