Persistence: SqliteSaver

(State survives program restart)

START

extraction_node:
Fetches and pre-processes DOM, identifies CMP type if possible

llm_node:
Receives DOM data, last messages and system prompt with injected static few-shot examples; selects next action

Did the LLM call a tool?

Yes

No

llm_calls >= 20?

Yes

No

rule_output_node:
Tries to extract the generated ruleset from the final LLM message and storing it as a dictionary in final_result.

Ruleset found and deserializeable to a dictionary?

No

Yes

END

human_review_node:
Trigger: attempts ≥ 20 and tool call pending
→ interrupt() pauses agent
→ State persisted in SQLite
→ Waiting for external feedback

tool_node:
Tool is executed
- analyse_screenshot
- test_rule (args_schema: CoMRuleset (Pydantic) → Schema validation on invocation)
- human_review_node

Observation: loop back

LLM called request_human_review

Tool result: loop back

external input:
Feedback via console
